

Module8-线程

一、选择题

Question 1

Which two code fragments will execute the method doStuff() in a separate thread? (Choose two.)

A. new Thread() {
public void run() { doStuff(); }
}

B. new Thread() {
public void start() { doStuff(); }
}

C. new Thread() {
public void start() { doStuff(); }
} .run();

D. new Thread() {
public void run() { doStuff(); }
} .start();

E. new Thread(new Runnable() {
public void run() { doStuff(); }
}).run();

F. new Thread(new Runnable() {
public void run() { doStuff(); }
}).start();

Answer: DF

Question 2

Given:

```
11. Runnable r = new Runnable() {  
12. public void run() {  
13. System.out.print("Cat");  
14. }  
15. };  
16. Thread t=new Thread(r) {  
17. public void run() {  
18. System.out.print("Dog");  
19. }  
20. };  
21. t.start();
```

What is the result?

- A. Cat
- B. Dog
- C. Compilation fails.
- D. The code runs with no output.
- E. An exception is thrown at runtime.

Answer: B

Question 3

Given:

1. public class Threads3 implements Runnable {
2. public void run() {
3. System.out.print("running");
4. }
5. public static void main(String[] args) {
6. Thread t = new Thread(new Threads3());
7. t.run();
8. t.run();
9. t.start();
10. }
11. }

What is the result?

- A. Compilation fails.
- B. An exception is thrown at runtime.
- C. The code executes and prints "running".
- D. The code executes and prints "runningrunning".
- E. The code executes and prints "runningrunningrunning".

Answer: E

Question 4

Click the Exhibit button:

1. public class Threads 1 {
2. Int x=0;
3. public class Runner implements Runnable {
4. public void run() {
5. int current = 0;
6. for(int i=0;i<4;i++){
7. current = x;
8. System.out.print(current + ", ");
9. x = current + 2;
10. }
11. }
12. }
- 13.
14. public static void main(String[] args) {

```

15. new Threads1().go();
16. }
17.
18. public void go() {
19. Runnable r1 = new Runner();
20. new Thread(r1).start();
21. new Thread(r1 ).start();
22. }
23. }

```

Which two are possible results? (Choose two.)

- A. 0, 2, 4, 4, 6, 8, 10, 6,
- B. 0, 2, 4, 6, 8, 10, 2, 4,
- C. 0, 2, 4, 6, 8, 10, 12, 14,
- D. 0, 0, 2, 2, 4, 4, 6, 6, 8, 8, 10, 10, 12, 12, 14, 14,
- E. 0, 2, 4, 6, 8, 10, 12, 14, 0, 2, 4, 6, 8, 10, 12, 14,

Answer: AC

Question 5

Given:

```

1. public class Threads4 {
2. public static void main (String[] args) {
3. new Threads4().go();
4. }
5. public void go() {
6. Runnable r = new Runnable() {
7. public void run() {
8. System.out.print("foo");
9. }
10. };
11. Thread t = new Thread(r);
12. t.start();
13. t.start();
14. }
15. }

```

What is the result?

- A. Compilation fails.
- B. An exception is thrown at runtime.
- C. The code executes normally and prints "foo".
- D. The code executes normally, but nothing is printed.

Answer: B

Question 6

Given:

```

1. public class Threads5 {

```

```

2. public static void main (String[] args) {
3.   new Thread(new Runnable() {
4.     public void run() {
5.       System.out.print("bar");
6.     } }).start();
7.   }
8. }

```

What is the result?

- A. Compilation fails.
- B. An exception is thrown at runtime.
- C. The code executes normally and prints "bar".
- D. The code executes normally, but nothing prints.

Answer: C

Question 7

Given:

```

1. public class Threads2 implements Runnable {
2.
3.   public void run() {
4.     System.out.println("run.");
5.     throw new RuntimeException("Problem");
6.   }
7.   public static void main(String[] args) {
8.     Thread t = new Thread(new Threads2());
9.     t.start();
10.    System.out.println("End of method.");
11.  }
12. }

```

Which two can be results? (Choose two.)

- A. java.lang.RuntimeException: Problem
- B. run.
java.lang.RuntimeException: Problem
- C. End of method.
java.lang.RuntimeException: Problem
- D. End of method.
run.
java.lang.RuntimeException: Problem
- E. run.
java.lang.RuntimeException: Problem
End of method.

Answer: DE

Question 8

Click the Exhibit button.

Given:

```
10. public class Starter extends Thread {  
11.     private int x= 2;  
12.     public static void main(String[] args) throws Exception {  
13.         new Starter().makeItSo();  
14.     }  
15.     public Starter() {  
16.         x=5;  
17.         start();  
18.     }  
19.     public void makeItSo() throws Exception {  
20.         join();  
21.         x=x- 1;  
22.         System.out.println(x);  
23.     }  
24.     public void run() { x *= 2; }  
25. }
```

What is the output if the main() method is run?

- A. 4
- B. 5
- C. 8
- D. 9
- E. Compilation fails.
- F. An exception is thrown at runtime.
- G. It is impossible to determine for certain.

Answer: D

Question 9

Given:

```
1. public class TestOne {  
2.     public static void main (String[] args) throws Exception {  
3.         Thread.sleep(3000);  
4.         System.out.println("sleep");  
5.     }  
6. }
```

What is the result?

- A. Compilation fails.
- B. An exception is thrown at runtime.
- C. The code executes normally and prints "sleep".
- D. The code executes normally, but nothing is printed.

Answer: C

Question 10

Given:

```
1. public class TestOne implements Runnable {  
2. public static void main (String[] args) throws Exception {  
3. Thread t = new Thread(new TestOne());  
4. t.start();  
5. System.out.print("Started");  
6. t.join();  
7. System.out.print("Complete");  
8. }  
9. public void run() {  
10. for (int i= 0; i< 4; i++) {  
11. System.out.print(i);  
12. }  
13. }  
14. }
```

What can be a result?

- A. Compilation fails.
- B. An exception is thrown at runtime.
- C. The code executes and prints "StartedComplete".
- D. The code executes and prints "StartedComplete0123".
- E. The code executes and prints "Started0123Complete".

Answer: E

Question 11

Click the Exhibit button.

```
1. class Computation extends Thread {  
2.  
3. private int num;  
4. private boolean isComplete;  
5. private int result;  
6.  
7. public Computation(int num) { this.num = num; }  
8.  
9. public synchronized void run() {  
10. result = num * 2;  
11. isComplete = true;  
12. notify();  
13. }  
14.  
15. public synchronized int getResult() {  
16. while (!isComplete) {
```

```

17. try {
18. wait();
19. } catch (InterruptedException e) { }
20. }
21. return result;
22. }
23.
24. public static void main(String[] args) {
25. Computation[] computations = new Computation [4];
26. for (int i = 0; i < computations.length; i++) {
27. computations[i] = new Computation(i);
28. computations[i] .start();
29. }
30. for (Computation c : computations)
31. System.out.print(c.getResult() +" ");
32. }
33. }

```

What is the result?

- A. The code will deadlock.
- B. The code may run with no output.
- C. An exception is thrown at runtime.
- D. The code may run with output "0 6".
- E. The code may run with output "2 0 6 4".
- F. The code may run with output "0 2 4 6".

Answer: F

Question 12

Given:

```

7. void waitForSignal() {
8. Object obj = new Object();
9. synchronized (Thread.currentThread()) {
10. obj.wait();
11. obj.notify();
12. }
13. }

```

Which is true?

- A. This code may throw an InterruptedException.
- B. This code may throw an IllegalStateException.
- C. This code may throw a TimeoutException after ten minutes.
- D. This code will not compile unless "obj.wait()" is replaced with "((Thread) obj).wait()".
- E. Reversing the order of obj.wait() and obj.notify() may cause this method to complete normally.
- F. A call to notify() or notifyAll() from another thread may cause this method to complete normally.

Answer: A

Question 13

Given:

foo and bar are public references available to many other threads. foo refers to a Thread and bar is an Object. The thread foo is currently executing bar.wait(). From another thread, which statement is the most reliable way to ensure that foo will stop executing wait()?

- A. foo.notify();
- B. bar.notify();
- C. foo.notifyAll();
- D. Thread.notify();
- E. bar.notifyAll();
- F. Object.notify();

Answer: E

Question 14

Click the Exhibit button.

Given:

1. public class TwoThreads {
- 2.
3. private static Object resource = new Object();
- 4.
5. private static void delay(long n) {
6. try { Thread.sleep(n); }
7. catch (Exception e) { System.out.print("Error "); }
8. }
- 9.
10. public static void main(String[] args) {
11. System.out.print("StartMain ");
12. new Thread1().start();
13. delay(1000);
14. Thread t2 = new Thread2();
15. t2.start();
16. delay(1000);
17. t2.interrupt();
18. delay(1000);
19. System.out.print("EndMain ");
20. }
- 21.
22. static class Thread1 extends Thread {
23. public void run() {
24. synchronized (resource) {
25. System.out.print("Start1 ");

```

26. delay(6000);
27. System.out.print("End1 ");
28. }
29. }
30. }
31.
32. static class Thread2 extends Thread {
33. public void run() {
34. synchronized (resource) {
35. System.out.print("Start2 ");
36. delay(2000);
37. System.out.print("End2 ");
38. }
39. }
40. }
41. }

```

Assume that sleep(n) executes in exactly n milliseconds, and all other code executes in an insignificant amount of time. What is the output if the main() method is run?

- A. Compilation fails.
- B. Deadlock occurs.
- C. StartMain Start1 Error EndMain End1
- D. StartMain Start1 EndMain End1 Start2 End2
- E. StartMain Start1 Error Start2 EndMain End2 End1
- F. StartMain Start1 Start2 Error End2 EndMain End1
- G. StartMain Start1 EndMain End1 Start2 Error End2

Answer: G

Question 15

Given:

```

public class NamedCounter {
private final String name;
private int count;
public NamedCounter(String name) { this.name = name; }
public String getName() { return name; }
public void increment() { coount++; }
public int getCount() { return count; }
public void reset() { count = 0; }
}

```

Which three changes should be made to adapt this class to be used safely by multiple threads? (Choose three.)

- A. declare reset() using the synchronized keyword
- B. declare getName() using the synchronized keyword
- C. declare getCount() using the synchronized keyword
- D. declare the constructor using the synchronized keyword

E. declare increment() using the synchronized keyword

Answer: ACE

Question 16

Click the Exhibit button.

```
1. import java.util.*;
2.
3. public class NameList {
4.     private List names = new ArrayList();
5.     public synchronized void add(String name) { names.add(name); }
6.     public synchronized void printAll() {
7.         for (int i = 0; i < names.size(); i++) {
8.             System.out.print(names.get(i) + " ");
9.         }
10.    }
11.    public static void main(String[] args) {
12.        final NameList sl = new NameList();
13.        for(int i=0;i<2;i++) {
14.            new Thread() {
15.                public void run() {
16.                    sl.add("A");
17.                    sl.add("B");
18.                    sl.add("C");
19.                    sl.printAll();
20.                }
21.            }.start();
22.        }
23.    }
24. }
```

Which two statements are true if this class is compiled and run?
(Choose two.)

- A. An exception may be thrown at runtime.
- B. The code may run with no output, without exiting.
- C. The code may run with no output, exiting normally.
- D. The code may run with output "A B A B C C ", then exit.
- E. The code may run with output "A B C A B C A B C ", then exit.
- F. The code may run with output "A A A B C A B C C ", then exit.
- G. The code may run with output "A B C A A B C A B C ", then exit.

Answer: EG

Question 17

Given:

```
1. public class TestFive {
2.     private int x;
```

```

3. public void foo() {
4 int current = x;
5. x = current + 1;
6. }
7. public void go() {
8. for(int i=0;i<5;i++) {
9. new Thread() {
10. public void run() {
11. foo();
12. System.out.print(x + ", ");
13. } }.start();
14. }}}

```

Which two changes, taken together, would guarantee the output: 1, 2, 3, 4, 5, ? (Choose two.)

- A. Move the line 12 print statement into the foo() method.
- B. Change line 7 to public synchronized void go() {.
- C. Change the variable declaration on line 3 to private volatile int x;.
- D. Wrap the code inside the foo() method with a synchronized(this) block.
- E. Wrap the for loop code inside the go() method with a synchronized block synchronized(this) { // for loop code here }.

Answer: AD

Question 18

Which three will compile and run without exception? (Choose three.)

- A. private synchronized Object o;
- B. void go() {
 synchronized() { /* code here */ }
}
- C. public synchronized void go() { /* code here */ }
- D. private synchronized(this) void go() { /* code here */ }
- E. void go() {
 synchronized(Object.class) { /* code here */ }
}
- F. void go() {
 Object o = new Object();
 synchronized(o) { /* code here */ }
}

Answer: CEF

Question 19

Given:

- 1. public class TestSeven extends Thread {
- 2. private static int x;

```

3. public synchronized void doThings() {
4. int current = x;
5. current++;
6. x = current;
7. }
8. public void run() {
9. doThings();
10. }
11. }

```

Which is true?

- A. Compilation fails.
- B. An exception is thrown at runtime.
- C. Synchronizing the run() method would make the class thread-safe.
- D. The data in variable "x" are protected from concurrent access problems.
- E. Declaring the doThings() method as static would make the class thread-safe.
- F. Wrapping the statements within doThings() in a synchronized(new Object()) { } block would make the class thread-safe.

Answer: E

Question 20

Click the Exhibit button.

```

10. public class Transfers {
11. public static void main(String[] args) throws Exception {
12. Record r1 = new Record();
13. Record r2 = new Record();
14. doTransfer(r1, r2, 5);
15. doTransfer(r2, r1, 2);
16. doTransfer(r1, r2, 1);
17. // print the result
18. System.out.println("r1 = " + r1.get() + ", r2=" + r2.get());
19. }
20. private static void doTransfer(
21. final Record a, final Record b, final int amount) {
22. Thread t = new Thread() {
23. public void run() {
24. new Clerk().transfer(a, b, amount);
25. }
26. };
27. t.start();
28. }
29. }
30. class Clerk {
31. public synchronized void transfer(Record a, Record b, int amount){

```

```
32. synchronized (a) {  
33. synchronized (b) {  
34. a.add(-amount);  
35. b.add(amount);  
36. }  
37. }  
38. }  
39. }  
40. class Record {  
41. int num=10;  
42. public int get() { return num; }  
43. public void add(int n) { num = num + n; }  
44. }
```

If Transfers.main() is run, which three are true? (Choose three.)

- A. The output may be "r1 = 6, r2 = 14".
- B. The output may be "r1 = 5, r2 = 15".
- C. The output may be "r1 = 8, r2 = 12".
- D. The code may run (and complete) with no output.
- E. The code may deadlock (without completing) with no output.
- F. M IllegalStateException or InterruptedException may be thrown at runtime.

Answer: ABE

二、拖拽题:

Question 1:

```
Given: 10. Runnable r = new Runnable() {  
11.     public void run() {  
12.         try {  
13.             Thread.sleep(1000);  
14.         } catch (InterruptedException e) {  
15.             System.out.println("interrupted");  
16.         }  
17.         System.out.println("ran");  
18.     }  
19. };  
20. Thread t = new Thread(r);  
21. t.start();  
22. System.out.println("started");  
23. t.sleep(2000);  
24. System.out.println("interrupting");  
25. t.interrupt();  
26. System.out.println("ended");
```

Assume that sleep(n) executes in exactly n milliseconds, and all other code executes in an insignificant amount of time.

Place the fragments in the output area to show the result of running this code.

Output	Fragments
<input type="text" value="Place here"/>	<input type="text" value="interrupted"/>
<input type="text" value="Place here"/>	<input type="text" value="ran"/>
<input type="text" value="Place here"/>	<input type="text" value="started"/>
<input type="text" value="Place here"/>	<input type="text" value="interrupting"/>
<input type="text" value="Place here"/>	<input type="text" value="ended"/>
<input type="text" value="Place here"/>	<input type="text" value="InterruptedException:"/> <i>(no more output)</i>

Done

Answer:

started
ran
interrupting
ended
no more output

Question 2:

Place the code elements into the class so that the code compiles and prints "Run. Run. doIt." in exactly that order. Note that there may be more than one correct solution.

```
public class TestTwo extends Thread {  
    public static void main (String[] a) throws Exception {  
        TestTwo t = new TestTwo();  
        t.start();  
          
          
          
    }  
    public void run() {  
        System.out.print("Run. ");  
    }  
    public void doIt() {  
        System.out.print("doIt. ");  
    }  
}
```

Code Elements

<code>t.start();</code>	<code>t.join();</code>	<code>t.pause(10);</code>	<code>run();</code>
<code>t.run();</code>	<code>t.doIt();</code>	<code>doIt();</code>	

Done

Answer:

```
t.run();  
t.join();  
t.doIt();
```

Question 3:

Place the code elements in position so that the Flags2 class will compile and make appropriate use of the wait/notify mechanism.

Note: You may reuse code elements.

```
public class Flags2 {  
    private boolean isReady = false;  
  
    public Place here void produce() {  
        isReady = true;  
        Place here;  
    }  
  
    public Place here void consume() {  
        while (! isReady) {  
            try {  
                Place here;  
            } catch (Exception ex) { }  
        }  
        isReady = Place here;  
    }  
}
```

Code Elements

synchronized	true	false	wait()
volatile	synchronized()	notifyAll()	synchronize

Answer:

```
public class Flags2 {  
    private boolean isReady=false;  
    public synchronized void produce(){  
        isReady=true;  
        notifyAll();  
    }  
    public synchronized void consume(){  
        while(!isReady){  
            try{  
                wait();  
            }catch(Exception ex){}  
        }  
        isReady=false;  
    }  
}
```

Question 4:

Place a Class on each method that is declared in the class.

Method Name	Class
run()	java.lang.Object
wait()	java.lang.Thread
notify()	
sleep()	
start()	
join()	

Done

Answer:

run()-----java.lang.Thread
wait()-----java.lang.Object
notify()-----java.lang.Object
sleep()-----java.lang.Thread
start()-----java.lang.Thread
join()-----java.lang.Thread
